

Electric Boom Lift Attachment

Electric Boom Lift Attachment - Type "E" forklifts meet the minimum requirements for electrical hazards and fire. This is the most common designation used for electric trucks. Trucks described as type "E" cannot be used in hazardous sites. Type "ES" forklifts meet all the requirements of Type "E" forklifts and have added tools to be able to stop the emission of sparks and limit the surface temperature of forklift parts.

Type "ES" forklifts are more specialized and are not commonly found in the marketplace. Type "EE" trucks meet all the requirements of Type "E" and "ES" lift trucks and have all electric motors and spark producing electrical components totally enclosed because Type "EE" forklifts are normally used wherever a hazardous location has been recognized. Type "EX" trucks are particularly meant for use in atmospheres wherever vapors or flammable fibers or dust can be present. These trucks are constructed utilizing no spark generating parts along with several protective measures so as to guarantee optimum safety in the risky applications they may be called upon for.
