

Toyota Forklift Part

Toyota Forklift Parts - Since 1992, Toyota Material Handling inc., U.S.A., also known as TMHU, continues to be the top selling lift truck supplier in the U.S. Proudly celebrating more than 40 years of operations, the Irvine, California based business offers a complete line of quality lift vehicles. Attributable to their status of superiority, reliability, and durability, Toyota remains prevalent in this competitive market. Quality is the cornerstone of Toyota's renowned Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are built here.

All Toyota machines and components manufactured within North America adhere to the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to constant development, and its environmental methods. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70 percent fewer smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and regulations.

TMHU, U.S.A. - Leading the Industry

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its dedication to create high quality lift vehicles at the same time as providing superb client assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's largest lift truck supplier and is amongst the magazines celebrated World's Most Admired Companies.

New Meaning to Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not a lot of other organizations and no other lift truck maker can meet Toyota's record of caring for the environment while concurrently advancing the economy. Environmental accountability is an important aspect of corporate decision making at Toyota and they are proud to be the first and only manufacturer to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift trucks. Yet another reason they remain a leader within the industry.

In 2006, Toyota launched the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission standards, and also meets California's more involved 2010 emission standards. The finished invention is a lift vehicle that creates 70% less smog forming emissions than the current Federal standards tolerate.

Also in 2006, Toyota developed an affiliation with the Arbor Day Foundation, furthering their responsibility to the environment. In excess of 57,000 trees have been planted in regional parks and national forests damaged by environmental reasons such as fires, as a product of this relationship. 10,500 seedlings have also been spread through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood customers to help sustain communities all over the U.S.

Toyota's lift trucks offer enhanced efficiency, visibility, ergonomics and durability, and most significantly, the industry's leading safety technology. The company's System of Active Stability, also called "SAS", helps decrease the chance of incidents and accidental injuries, and increasing productivity levels while minimizing the likelihood of product and equipment damage.

System Active Stability can perceive conditions that may lead to lateral unsteadiness and potential lateral overturn. When any of these factors have been detected, the SAS will immediately engage the Swing Lock Cylinder to re-stabilize the rear axle. This adjusts the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the probability of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to avoid injuries or accidents while adding stability.

SAS was initially introduced to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS have been built-in to most of Toyota's internal combustion models. It is standard gear on the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in action, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with mandatory worker instruction, overturn fatalities across all models have decreased by 13.6% since 1999. Also, there have been an overall 35.5% decrease in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's standard of brilliance reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training program to help consumers meet OSHA standard 1910.178. Instruction courses, videos and assorted materials, covering a wide scope of matters-from personal safety, to OSHA regulations, to surface and load situations, are accessible through the dealer network.

Toyota has sustained a continuous existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift vehicle. This fact is demonstrated by the statistic that 99% of Toyota lift trucks bought in America now are manufactured in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land. Facilities include a National Customer Center, as well as production operations and distribution centers for equipment and service

components, with the total commitment exceeding \$113 million dollars.

The modern NCC was designed to serve TMHU customers and dealers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its originator, Sakichi Toyoda, in 1867, and finally a education center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations all through the United States, providing the most comprehensive and inclusive client support and customer service in the industry. The company's new and Certified Used lift trucks, service, components, and financing capabilities make Toyota dealerships a one-stop shop to guarantee total customer satisfaction.
